Launch of a new Moduflex loading chute model!

Cimbria Bulk Equipment and TBMA now have the pleasure of launching a new loading chute series, designated as the **A-series**. The series is developed on request from our dealers in order to meet market demands. The A-series combines the versatility and light construction of the standard series with the capacity and durability of the shiploading-series thus covering a gap between the two series.

The new series will be an obvious choice in various situations as e.g. when stockpiling coal or wooden pellets in warehouses or for low demanding shiploading tasks. We believe this new developed chute series will complete our product range and that the market possibilities will be even bigger in future time.

The A-series is available in 4 models with following capacities:

- A400: 440m³/hour
- A500: 700m³/hour
- A650: 1200m³/hour
- A800: 1800m³/hour

All models can be supplied in steel 37, AISI304 and Hardox, and are available with full approval and certificates for location in ATEX zone 22/20. As the A-series can be mounted directly in the flange, the mounting is very easy and the built-in height is low.

For more information:

More information about Moduflex loading chutes you can find on our website. If you have specific questions or like to receive an offer please contact our sales department directly via e-mail: sales@tbma.com. We are eager to assist and advice you regarding your outloading problems.
